## PROFILE

I am a Frontend developer who focuses on creating attractive, responsive, and functional user interfaces on various websites or applications. My skills lie in mastering HTML, CSS, and JavaScript, often utilizing frameworks such as React, Angular, or Vue.js. I combine creativity with technical understanding to create optimal user experiences. I also actively collaborate with the design team to bring design and development together, ensuring that the final product not only looks great but is also easy to use and intuitive for users. Good communication skills, the ability to solve problems creatively, and an interest in new technological developments are things that I rely on as a Frontend developer.
